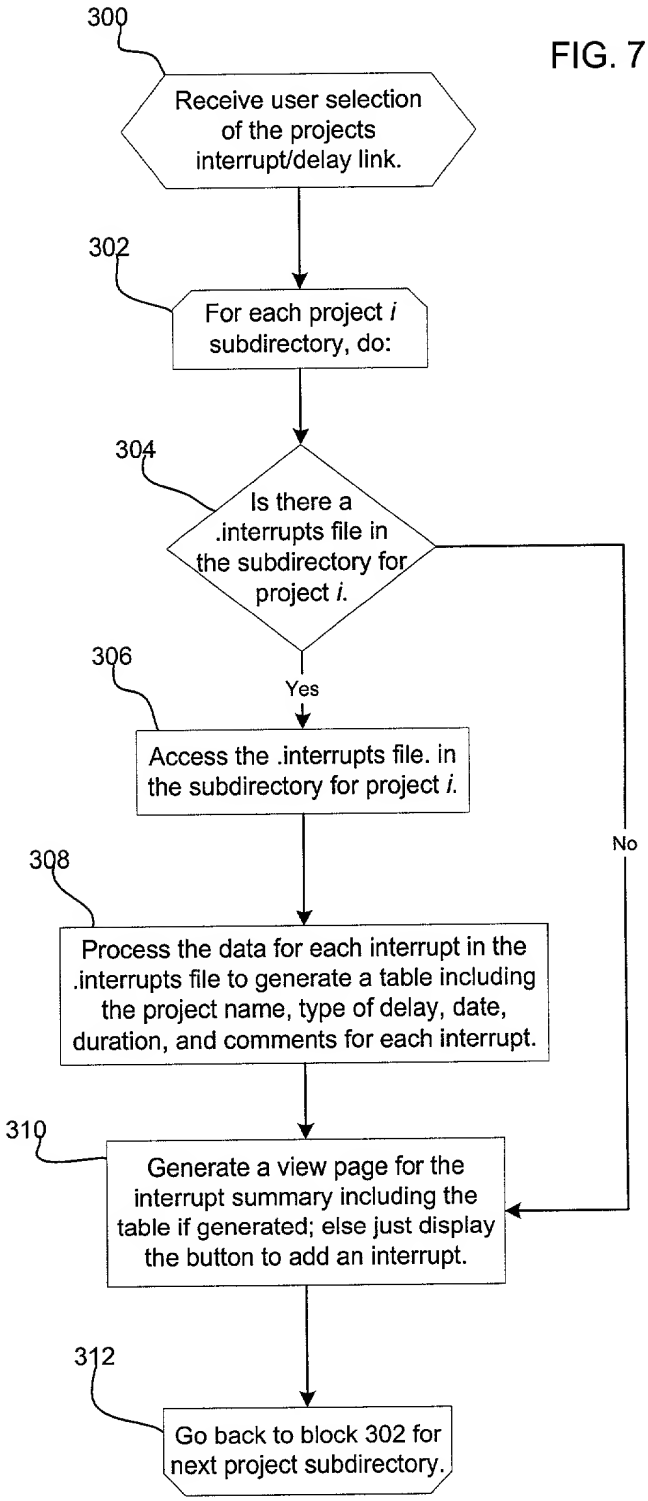
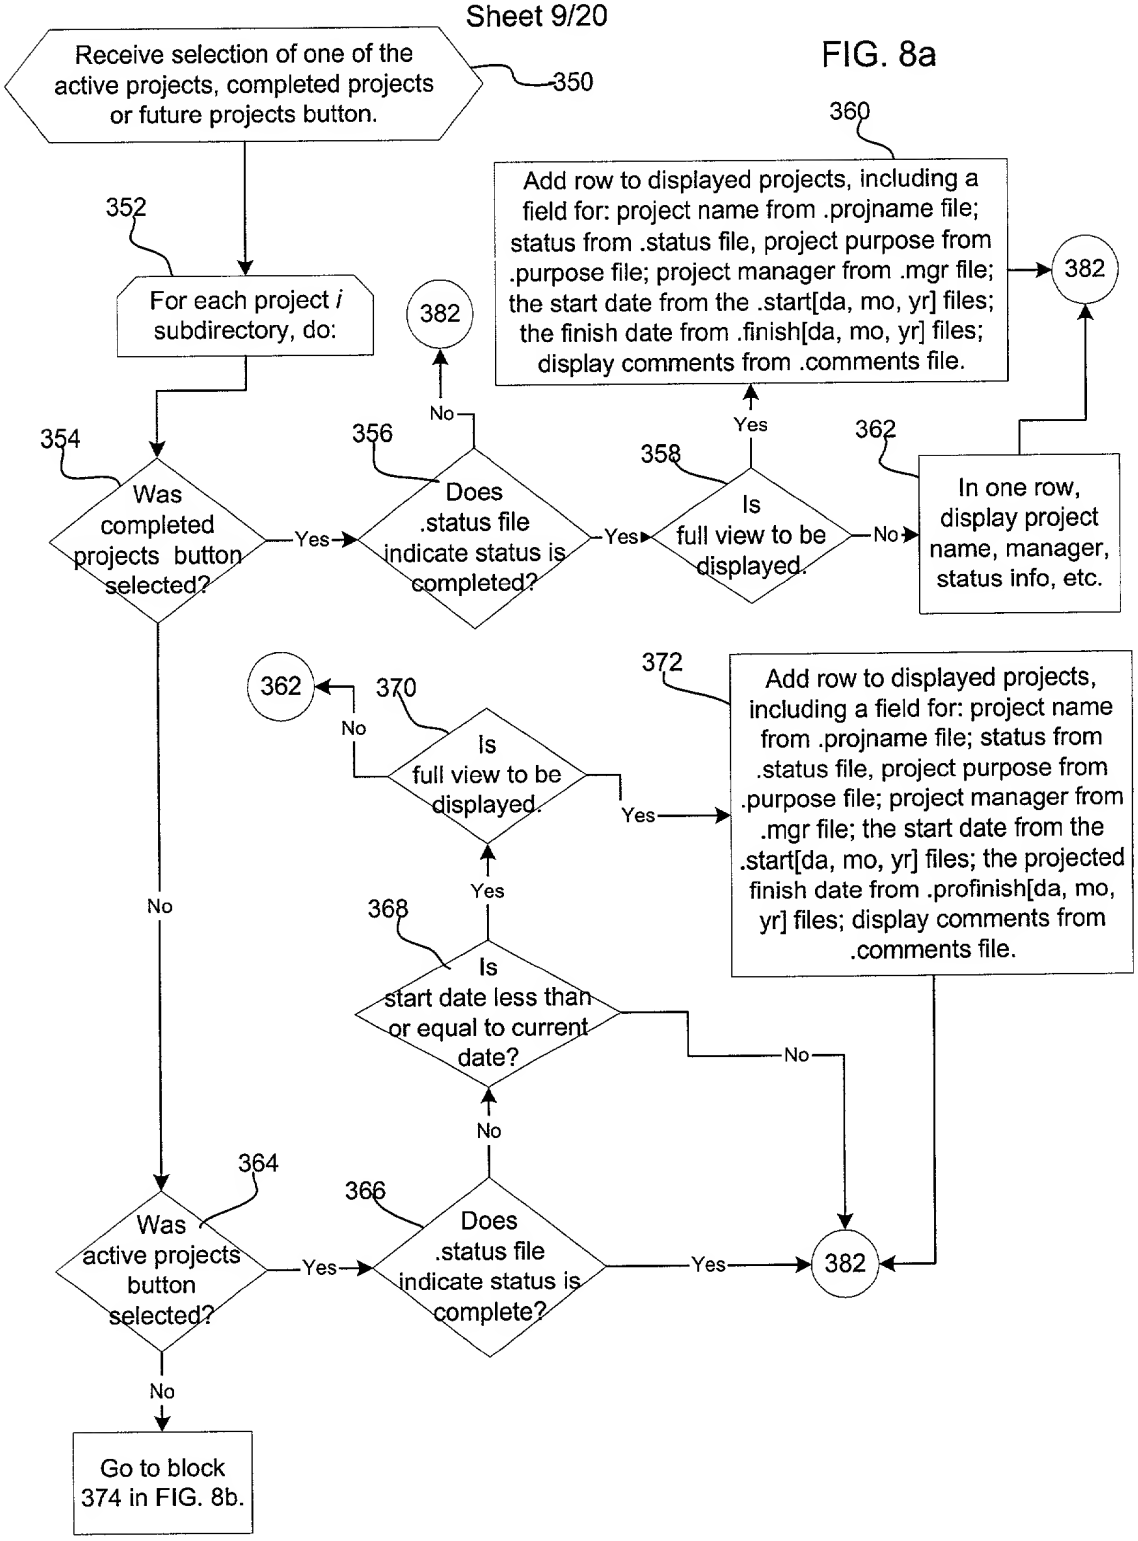
Add New Interrupt

FIG. 7



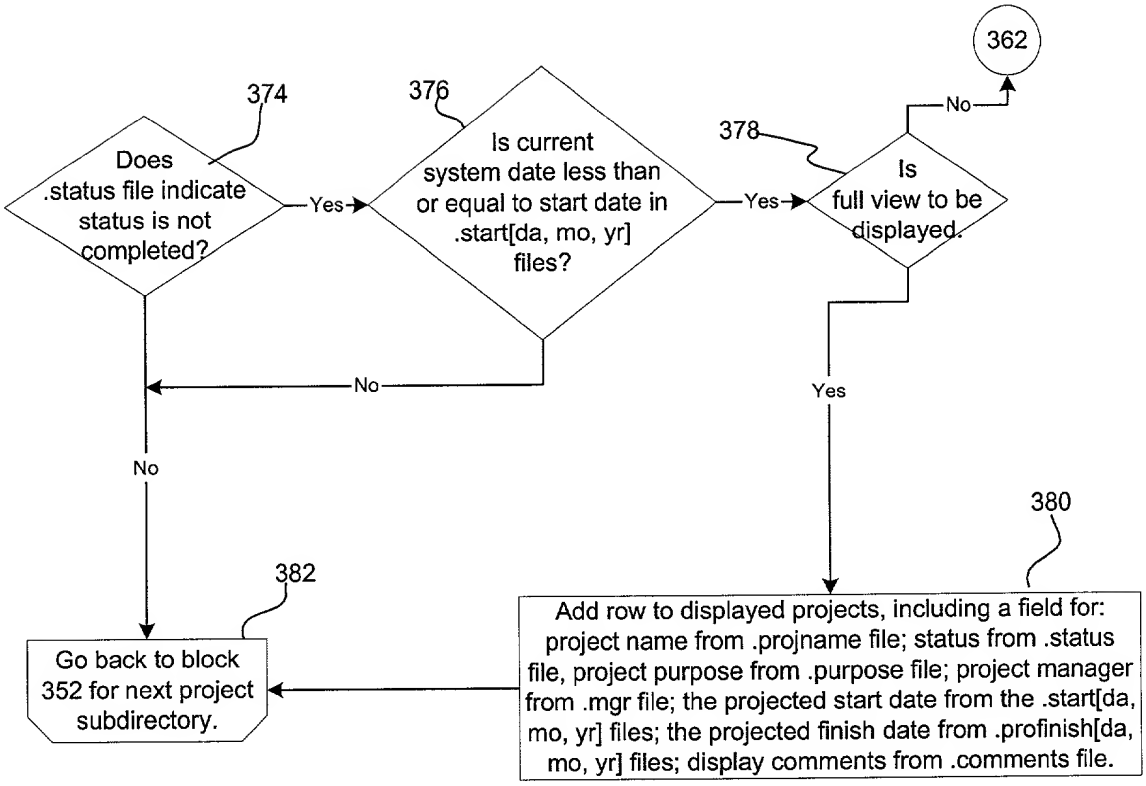
300
Receive user selection of the projects interrupt/delay link.
302
For each project *i* subdirectory, do:
304
Is there a .interrupts file in the subdirectory for project *i*.
Yes
No
306
Access the .interrupts file. in the subdirectory for project *i*.
308
Process the data for each interrupt in the .interrupts file to generate a table including the project name, type of delay, date, duration, and comments for each interrupt.
310
Generate a view page for the interrupt summary including the table if generated; else just display the button to add an interrupt.
312
Go back to block 302 for next project subdirectory.

FIG. 8a



Receive selection of one of the active projects, completed projects or future projects button.
350
352
For each project *i* subdirectory, do:
354
Was completed projects button selected?
Yes
356
Does .status file indicate status is completed?
No
382
Yes
358
Is full view to be displayed.
No
360
Add row to displayed projects, including a field for: project name from .projname file; status from .status file, project purpose from .purpose file; project manager from .mgr file; the start date from the .start[da, mo, yr] files; the finish date from .finish[da, mo, yr] files; display comments from .comments file.
382
362
In one row, display project name, manager, status info, etc.
No
362
370
Is full view to be displayed.
Yes
372
Add row to displayed projects, including a field for: project name from .projname file; status from .status file, project purpose from .purpose file; project manager from .mgr file; the start date from the .start[da, mo, yr] files; the projected finish date from .profinish[da, mo, yr] files; display comments from .comments file.
Yes
368
Is start date less than or equal to current date?
No
No
No
364
Was active projects button selected?
Yes
366
Does .status file indicate status is complete?
Yes
382
No
Go to block 374 in FIG. 8b.

FIG. 8b



362
374
376
378
Does .status file indicate status is not completed?
Yes
Is current system date less than or equal to start date in .start[da, mo, yr] files?
Yes
Is full view to be displayed.
No
No
Yes
No
380
382
Add row to displayed projects, including a field for: project name from .projname file; status from .status file, project purpose from .purpose file; project manager from .mgr file; the projected start date from the .start[da, mo, yr] files; the projected finish date from .profinish[da, mo, yr] files; display comments from .comments file.
Go back to block 352 for next project subdirectory.

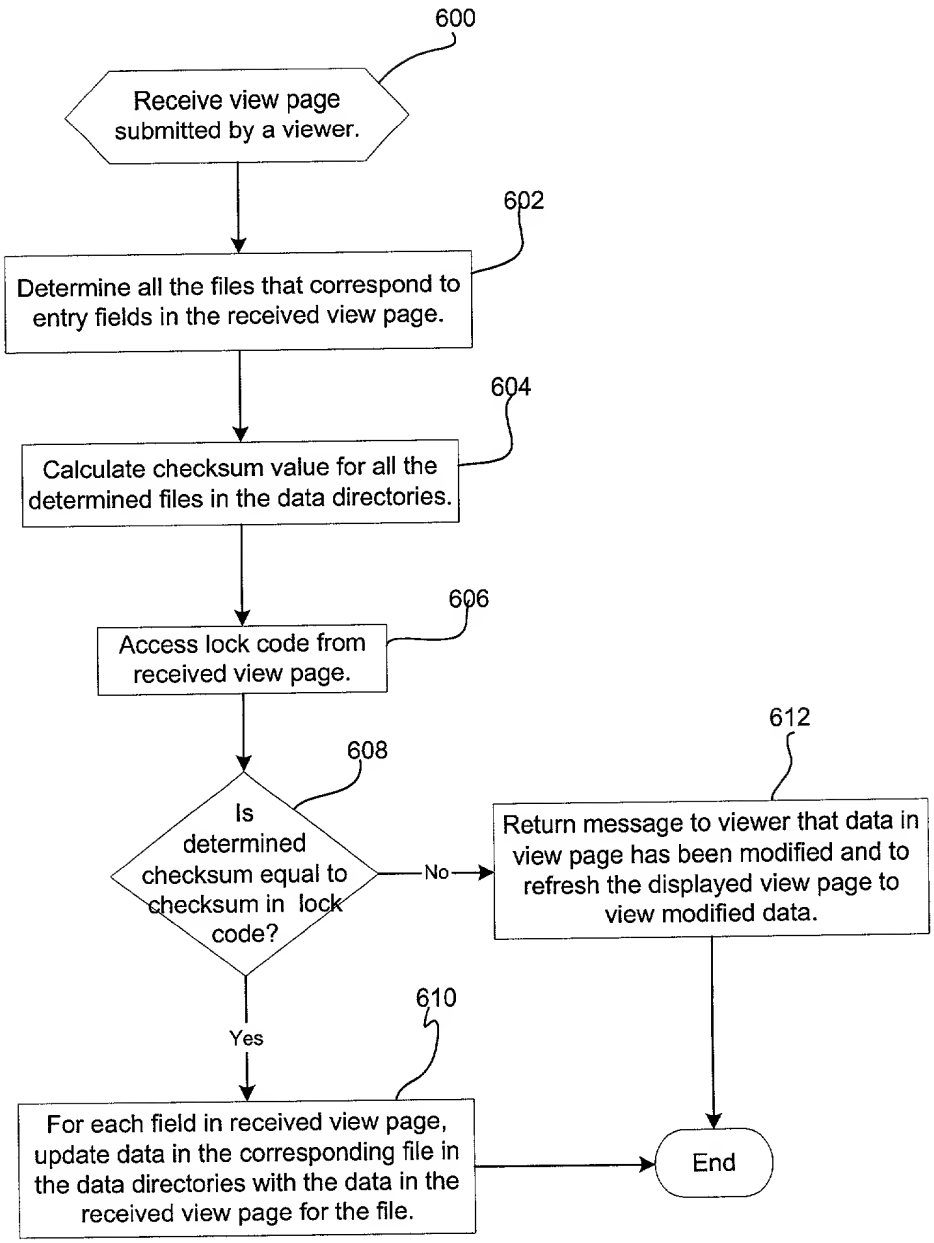
550
Receive request for view page from a viewer.
552
Access template for requested view page.
554
Determine all files that are referenced in the view page and that supply data to the view page.
556
Insert data from files into corresponding fields in view page template.
558
Determine checksum value for all the determined files
560
Add determined checksum value as non-displayed lock code into view page.
562
Return generated view page to requesting viewer.

FIG. 16



600
Receive view page submitted by a viewer.
602
Determine all the files that correspond to entry fields in the received view page.
604
Calculate checksum value for all the determined files in the data directories.
606
Access lock code from received view page.
608
Is determined checksum equal to checksum in lock code?
No
612
Return message to viewer that data in view page has been modified and to refresh the displayed view page to view modified data.
Yes
610
For each field in received view page, update data in the corresponding file in the data directories with the data in the received view page for the file.
End

750
Receive view page submitted by a viewer.
752
For each lock code i in the view page, do:
754
From lock code map, determine the one or more files associated with lock code i that correspond to entry fields in the received view page.
756
Calculate checksum value for the determined file(s) in the data directories.
758
Access value for lock code i from received view page.
760
Is calculated checksum equal to checksum in lock code i?
Yes
762
For each field in received view page corresponding to one of determined files, update data in the determined file with the data in the corresponding data field in the received view page.
No
764
Append into message the name of the determined fields.
766
Go back to block 752 for next lock code in received view page.
768
Was message generated with name of determined data fields associated with lock code that was not validated?
Yes
770
Generate into message including name of any determined data fields that any changes to the named data fields were not made and to refresh the view page to view any modifications made by others and resubmit the changes for those fields.
No
End

FIG. 18
